PROFESSIONAL SUMMARY

Full-Stack Software Engineer experienced in **modernizing enterprise platforms**, designing reliable systems, and implementing solutions across legacy and modern application stacks. Strong in **system design, cross-platform thinking, technical ownership, code reviews, and mentoring**.

WORK EXPERIENCE

- Workflow GmbH | Software Engineer (Previously Software Engineering Intern)** Sep 2024 – Present
Vienna, Austria
 - Migrated enterprise applications from **Java 8 to Java 17**, establishing a modern technical foundation that enabled subsequent framework upgrades, especially **Hibernate 6**.
 - Designed a **Caffeine L1 + Redis L2 cache architecture** with cross-node invalidation and JCache/Hibernate integration; added composite management so modern caches and Ehcache 2 could coexist during incremental Hibernate 6 adoption.
 - Co-designed and implemented a transaction-based **Time Valuation Engine** with configurable rules for automatic pauses, overtime, compensatory rest, and interval validity while preserving source bookings.
 - Re-architected **HR-Expert from Vaadin 7 to Vaadin 23** by extracting UI-neutral contracts and introducing Flow adapters, enabling incremental migration of navigation, dashboards, and HR workflows while preserving legacy behavior.
 - Designed **offline kiosk synchronization** for attendance and project-time bookings, with persisted UTC batches, duplicate protection, time-zone-aware replay, asynchronous processing, and traceable outcome states.
 - Designed a **parent-child localization model** with translation fallback, merged language exports, and selective overrides, preventing duplicated text modules while supporting regional and customer terminology across DACH markets.
- Karyar College | Programming Mentor & Course Supervisor** Jul 2020 – Oct 2024
Tehran, Iran
 - Mentored students individually and in groups, reviewed code, helped debug programming problems, and guided projects in **Python, Django, REST APIs, and SQL** to build independent problem-solving skills.
 - Supervised course activities and delivered workshops on Python, Pandas, NumPy, socket programming, and object-oriented programming.
- Tadbir Pardaz Company | Part-time Backend Developer** Dec 2022 – Dec 2023
Tehran, Iran
 - Developed backend services for **financial and trading systems** using C#, ASP.NET, and microservice-based architectures, with RabbitMQ supporting reliable asynchronous communication and transaction-processing workflows.
 - Established **Confluence** documentation for code and system knowledge, improving collaboration and maintainability.

TECHNICAL SKILLS

- Programming Languages:** Java, Python, JavaScript, C#
- Backend:** Spring Boot, Spring Framework, Hibernate / JPA, REST APIs, Microservices, Django, Celery
- Databases, Caching & Messaging:** PostgreSQL, Microsoft SQL Server, Redis, Kafka, RabbitMQ
- Frontend:** React, HTML, CSS
- Cloud & DevOps:** AWS Fundamentals (EC2, S3, IAM, RDS, CloudWatch), Docker, Jenkins, Linux, Git, Grafana
- Software Engineering:** Distributed Systems, System Design, Concurrent Programming, Performance Optimization

EDUCATION

University of Tehran (Iran's leading university for Engineering & CS)

Bachelor of Computer Science

Tehran, Iran

Sep 2018 – Jan 2024

HONORS AND AWARDS

- Faculty of Engineering Top Student of the Year (the FOE Award) | [View Certificate](#) Sep 2019

LANGUAGES

- Persian (Native)
- English (Professional – **IELTS Overall 8.0** | [View Certificate](#))
- German (A2 – Elementary)
